

SLUMPHUMP MOLDS

SlumpHump™ is a durable plastic mold that allows you to pour your own low-cost plaster molds, quickly and easily. Available in fourteen popular shapes and sizes, the SlumpHump™ is a reversible mold; you can pour both slump and hump molds. The tapered wall allows you to vary the mold simply by adding plaster to the desired depth. In this way, you can make both a baking dish and a platter from the same mold simply by varying the depth of the plaster form. Drape the clay slab over or into your finished plaster mold to create a beautiful handmade product. The versatility of the SlumpHump™ allows you to accurately reproduce a single item or an endless variety of designs. The SlumpHump™ is the perfect system for schools or the studio potter.
